

Resume Builder

Narrowing Down the Problem:

People waste too much time trying to determine the layout of their resume and are unsure of the information that actually needs to be put on a resume. For individuals who are building their resumes for the first time, it might be helpful to understand what content is required. Our app will focus more on content rather than design, so individuals can universally apply their resumes across jobs and industries.

App Walk Through:

- One, simple template for the resume
- Prompts User for Information
 - Required:
 - Contact Info
 - Email
 - Phone Number
 - LinkedIn
 - Education
 - University
 - Awards
 - Major
 - GPA
 - Personalize:
 - Relevant Work Experience
 - Relevant Coursework
 - Extracurricular Activities
 - Projects
 - Soft/Hard Skills
 - Objective
- Fields are filled out, the template gets made
- If the template is too long, we give tips on how to shorten the resume to one page and which categories might be more important than others
- Other features:
 - Cover Letter
 - Personal site

Features and Technical Design:

Refer to the diagram.

Clarifying Definitions and Requirements:

The main requirement to use this app is to need a resume.

Users and Their Expectations:

The main users of this app will be people looking to build a simple resume. The expectation is that content will be the focus over layouts and templates. It should be easy to use and update as required. Mainly, we want to make this app time efficient for people looking for a job.

App's Theme:

Similar theme to [academicpages](#)

Potential Competition:

Resume builder sites focus too much on templates that don't necessarily work for some of the resume screening tests done at companies. Our resume builder site has one, simple template that can be read easily and is focused more on the content, rather than the aesthetic. Also, no sign-ins, no emails!
